

AIRHAT

HAS EVERYTHING COVERED!

- Increases slurry storage capacity
- Reduces volume of rainwater to be spread
- Reduces ammonia loss
- Reduces odour emissions
- Can be fitted to any new or existing steel or concrete slurry tank without modification to the structure

TOP THAT!

The AIRHAT is manufactured from a high-quality, watertight, reinforced PVC foil, with high resistance to heat and UV radiation. The cover is attached to a circular ring set on the top of the tank and sealed to the tank wall.

Once constructed the AIRHAT is inflated using a small electric blower with a power consumption similar to that of a 150 watt light bulb. With the blower in continuous operation, the cover takes the form of a dome which sheds precipitation very effectively.

*AIRHAT is distributed and installed by Reliant Installations Ltd
35 years experience installing slurry stores*
