

Pillosol

Isolation sheeting for greenhouses

Effective glasshouse protection requires a broad-spectrum product with specific properties. Pillosol is a transparent 3-layer isolating material with inbuilt air cushions. Providing optimal isolation, it provides excellent light translucency. It is long lasting and economical in use. Pillosol is 100% recyclable for use in the production of similar films.

Installation

Pilloclick installation items are used for installing Pillosol sheeting on both on the inside and the outside of the glass. Pilloclick items are attached to the glass using a silicone-based adhesive. The foil is attached to the glass secure against the wind.
